PHYS 5630

Dr. Hirosky

Intro to fitting assignment: C

Honestly, I already did this whole analysis in Python. Please just go and look at that document. I've put some of the plots in here just in case you wanted to see them though.

This is for 12 points, 10,000 runs. But just like the python code, we can adjust the parameters as needed. It's just that since I was running in xQuartz, the plotting was taking a long time, and I don't really want to be sitting at my computer plotting all night!
